

The logs & branches act as a sponge, storing water when it rains & releasing it during dry times

The bed is its own compost pile. It provides your plants with nutrients for

20 YEARS

Imagine a self watering garden!

NOW

Except in cases of EXTREME drought, you may never have to water your bed again after the first year.

Hügelkultur (hoogle-culture) is a system of building raised bed gardens that originated in Germany. Beds are mounds made of logs, branches, yard & kitchen waste, dirt & mulch.

- The benefits are
- ◇ generate heat to extend the season
 - ◇ sequester carbon in the soil
 - ◇ cut down on water bills
 - ◇ no more buying compost
 - ◇ tall beds = less bending

Sustainable gardens made from logs & other crap

Hügelkultur

if you really think the environment is less important than the economy, try holding your breath while you count your money.

Making a hugelkultur is fun & easy. Use any wood except cedar or black walnut. Build 3 feet tall, 3 feet wide, & 6 feet long. Make it in fall to use next spring!
